Teaching

Weight: 30

Manager Evaluation

Rating: **(3) - Very Good/Excellent**

Response: With a single course release for tenure track or tenured faculty research, by policy the maximum to put for teaching would be 80% (e.g. by the policy with no release it would be 80%, with 10% being required to go into each of the other categories) and then this should be reduced due to the single course release for tenure track research, say by 10%, and then further due to the additional multiple course release for service to the department as associate chair, and I feel it is a reasonable choice, as we just discussed in email, to put 30%.

For the scoring, I have reviewed over your courses and the associate student evals and do not see any concerns rather just lots of nice work! I feel that you work justifies a

Employee Evaluation

Response: 30%

score of very good/excellent, which I have recorded. The only suggestion I can add for the future is to consider adding some supplemental content, such as vids, that, for example, either expand on specific class problems that you know students commonly struggle with or illustrate how certain class work can be connected to related applications from their major or research etc

Scholarly Activity

Weight: 30

Manager Evaluation

Rating: **(4) - Outstanding**

Response: As discussed in email 9/29 and then in teams meeting, swapping to 40% service and 30% scholarly due to the very heavy service load from AY 24/25 including serving as associate chair.

For the scoring, from our COAS P&T guidelines and as I have personally noted before: It is my opinion that a tenure track or tenured faculty member in the general felid of applied maths working at an University such as ours (e.g. one with a fairly heavy teaching load) will be meeting yearly research expectations for an AY by producing the output of at least 1 publication into reputable journals, in addition to some other activities for example dissemination activities such as conference presentations with reports and/or taking some action to seek support, such writing a grant proposal for as an external funding, for their future work. And, upon reviewing the documents you have submitted it is clear that you have not only met these expectations but more than doubled them and I feel this justifies a rating of at least exceeding expectations. However, I am elevating the score to an outstanding as I feel that while we do our best to evaluate research based on data & outputs, there is always going to be some subjectivity that only a human who has expertise can identify and **some outputs that are just way awesome and you have one this year. I would like to emphasize the**

Response: 40%

excellent work in your article to ASEE in collaboration with our colleagues from the school of engineering. I feel there is a lot of great opportunities for the growth of our eng programs, and therefore our department supporting! Please do continue related work

Service

Weight: 40

Manager Evaluation		Employee Evaluation	
Rating:	**(4) - Outstanding**		
Response:	As discussed in email 9/29 and then in teams meeting, swapping to 40% service and 30% scholarly due to the very heavy service load from AY 24/25 including serving as associate chair. For the scoring, I can not say enough words about how grateful I am for the day in day out work you did last year in the associate chair role. I know you did a lotttt of work there, in addition to serving on several other committees and working on the BSDS proposal, thus I feel the scoring here is 100% top marks!	Response:	30%

Planning: Workload Percentages for AY 2025-2026

Teaching: Enter the workload percentage from AY2025-2026.

Manager Evaluation		Employee Evaluation	
Rating:	**45%**	Rating:	**35%**
Response:	The Maximum value tenure or tenure track faculty can put into teaching is 80% (e.g. it is required by policy to put at least 10% into each of the others) and then effort can be reduced by course release or otherwise adding effort elsewhere. This year you will have two course release, one for TT research and one for PC, so the % should be reduced by at least 10%/per but I feel going 35% is a bit to low so adjusting to 45% and then reducing each of the other categories by equal 5%. And, for the teaching plan (which we somewhat previously, unofficially, discussed)	Response:	

Aug = MATH 412 + 502 (total 6 credits)
Oct = DSCI 201 (total 3 credits this term, cum 9)
Jan = RSCH 395 + MATH 502 (total 6 credits, cum 15)
Mar = DSCI 311 (total 3 credits, cum 18) + 3 credits for the PC course release = 21 credits, or 7 classes which meets the load requirement

Scholarly Activity: Enter the workload percentage from AY2025-2026.

Manager Evaluation		Employee Evaluation	
Rating:	30%	Rating:	35%
Response:	As note above, I concur with the % choice and making the slight change to offset added % into teaching, For the plan, I would suggest you to keep plugging with the good work as you have been doing for the last several years. One thought I would share is, with the soon to be tenure application, I would start thinking about what specific area you plan to highlight there as your "area of focus" as they often like to look at the promise of future scholarship in a very focused domain. Then focus some of the research work this year into activities that would lead to output, such as journal publications, to make that shine!	Response:	

Service: Enter the workload percentage from AY2025-2026.

Manager Evaluation		Employee Evaluation	
Rating:	25%	Rating:	30%
Response:	adjusting % as noted above, and for the plan I would encourage to not overly service yourself with to many other committee (maybe 1 local department committee + 1 with more broad reach), and really focus your effort onto both growing & fine tuning the BSDS. While fundamentally marketing is the job of ERAU's marketing office, that doesn't mean we can't do additional things ourselves and/or things to support their work. The growth of enrollments into BSDS will be huge and has the potential to lift MST to the next level, just like I did in Db maths department. I thank you in advance for all of your good work and look forward to seeing	Response:	

the future success!!
