8 - Please share your thoughts on your overall learning experience in this course and include any suggestions you have for improvement.

Response Rate	5/9 (55.56%)

• Perhaps moving module 8 to module 1, module 8 covers a variety of programming languages after completing many assignments in python. perhaps this could be the first lesson to provide a better structure flow of the course.

• This course was fantastic, the instructor's assignments were consistent and understandable, challenging but never overwhelming. I have no recommendations.

• I had a great experience with this course, I am new to python and, I have learned the basics and how to clean and analyse large sets of raw data from this course.

• I thought this class was absolutely superb. Professor Chamberlain created a very welcoming and open environment for learning about Python. The real relevance of what we were learning was always explained, and could be seen through the assignments we did. Various teaching methods were used like the PY4U textbook, the lectures, the documentation, and the codebooks themselves. I really liked the codebooks because they allowed me to tinker with the code myself. All of the materials for the class were laid out very clearly and intuitively as well. Well, all the materials except the Collaborative Group Documentation. I think they were laid out okay, honestly, but they were a little clunky to access. Perhaps if they were all compiled into one page that each team contributed to, instead of multiple pages for each team, that might be better. Then, you wouldn't need to click through the pages to look for things, you could just scroll one page. Professor Chamberlain was always very responsive when I asked questions, and always gave good feedback to help me out. He helped me out on multiple occasions and even saved me from a few headaches! His grading for assignments was always clearly expressed, and graded fairly and with good feedback. Overall, I thought this class was a superb introduction not only to Python, but to coding in general. I look forward to using the skills I learned here in future projects, both personal and professional!

• All things considered, this course made it easier for me to understand the full process of a data science project, from raw data to cleaning, analysis, and presenting findings. I developed my analytical and technological skills by learning how to deal with datasets and compute statistics using tools like Python, Pandas, and Jupyter Notebook. Troubleshooting coding bugs was sometimes difficult, especially when juggling a full-time job and education. One recommendation for improvement would be more examples or brief courses on typical code errors and how to correct them. All things considered, the course was a worthwhile experience that improved my understanding of how data can be used to address practical issues.

6/9 (66.67%)	5.00	0.00	5.00	3921	4.60	0.78	5.00	11234	4.58	0.82	5.00

12 - What aspects of the course structure helped you learn most effectively?

Response Rate	4/9 (44.44%)

- The way assignments were connected and flowed across modules made the material especially understandable.
- Discussion and projects of the course were really helpful, as I have learned a lot through these, helped me do my own research and it was good way to learn new things.
- All of the different teaching methods were really helpful. From the lectures, to the PY4U videos, to the textbook, to the documentation, there were many places that I could find information about what I was trying to do. What helped most of all was being able to get my hands on the program itself and experiment with it and just have fun with it. It was just cool to figure out how to program things!
- Because it divided the project into smaller, more manageable pieces, the course's phased format was the most effective way for me to learn. Working through data collection, refinement, analysis, and reporting made the procedure easy to comprehend. Additionally, it made it easier for me to understand how each stage of a data science project builds upon the one before it. Using actual assignments with programs like Jupyter Notebook and Python also enhanced the learning process.

13 - The average amount of hours I spend on this course:

Response Option	Weight	Frequency	Percent
More than 15 hours	(4)	4	66.67%
10-14 hours	(3)	0	0.00%
