8 - Please share your thoughts on your overall learning experience in this course and include any suggestions you have for improvement.

Response Rate	8/25 (32%)

- The content was a little confusing to follow but I think i was able to understand the process, kind of. There were various instances where we kind of jumped through steps and the algorithm of how to solve certain problems wasn't very clearn. I think what would have helped is a couple of print outs that explained each process in a step by step manner.
- Best class Ive taken so far. I do hate the homework problems with the explain the steps of the problem problems though.
- Due to the amount of topics covered in the course, the required learning hours exceeds the projected amount of hours per week approximated by introductory presentations and seminars before starting graduate courses. While all of the content is important to review, perhaps a consolidation of a few topics or shortened ideas is the answer to better managing content length. A more detailed explanation of worked through problems in the lecture material would benefit all students in the course. Reviewing the content from the book vs what was brought forward in the lectures, sometimes had confusing views. What the book focused on and made important in that lesson, occasionally would not be what was discussed in the lecture notes at all. The book lacked relevant examples and instead focused on general equations. Locating a book with relevant worldly examples would definitely help reinforce learning as well as applications for the learned content.
- Dr. Chamberlain was very responsive and made this online course as interactive as possible, while still respecting the flexibility many of us need due to working full time while pursuing this degree.
- Overall, it was a good class. Lots of resources to use. I do wish the lectures weren't death by PowerPoint and were more handwritten, as in a professor writing out the lesson on a whiteboard. Also, the select all's on the homework were sometimes too long. But I do appreciate being able to retake the homework up to three times to get those types of questions correct.
- I think the course could benefit from more live solutions of PDE's with various methods, like handwritten step by step rather than it being revealed on a powerpoint slide or PDF. For me personally, I learn best that way, seeing a problem and physically pulling the resources for each step and getting live explanations, especially with so many charts and tables with various properties we're keeping track of.
- I would include cases of PDE related to stress analysis, such as vibrating beams
- The homework assignments included well-selected questions that encouraged me to think deeper into the material and think through the processes involved in the solutions of various problems. However, the question descriptions were sometimes difficult to understand. Also, I believe that some of the multiple-choice questions may not have provided the correct solution as an answer choice; the choices in these questions seemed to have mistakes. Nevertheless, with the homework and lectures combined, I feel that I was able to become familiar with each topic more quickly than if the lectures were separated from the homework.

9 - Instructions for assignments and activities were clear and easy to follow.

Response Option	Weight	Frequency	Percent

12 - What aspects of the course structure helped you learn most effectively?

Response Rate	7/25 (28%)

- The homeworks helped a ton.
- The videos were good
- I enjoyed the discussions. The flow charts are an excellent idea that I/students can take with them on there future endeavors.
- I hate to say it but probably the long homework quizzes because they forced me to pay attention and learn the content
- I had definitely enjoyed having a physical textbook to go off of, but I also definitely appreciate the videos that are there. Just definitely would have benefitted from more videos with just examples.
- Quizzes, although the responses are sometimes tricky, they push you out to perform the examples and practice for the final quiz.
- I appreciated how the course lectures were integrated into the homework assignments; this structure allowed me to make efficient use of my time, covering one topic at a time.

13 - The average amount of hours I spend on this course:

Response Option	Weight	Frequency	Percent
More than 15 hours	(4)	6	35.29%
10-14 hours	(3)	6	35.29%
5-9 hours	(2)	5	29.41%
0-4 hours	(1)	0	0.00%
