## Year 1: AY21-22 Student Comments [21/22 positive, 1/22 neutral]

In my first course at ERAU-W, Math 143, student feedback on my teaching was fairly positive. Of the 4 general comments on instructor, 3 were positive and praised the meaningful feedback I provided throughout the course. The 4th comment was mixed, stating > I felt he was more of an advisor than a teacher, if I needed assistance outside of what the course provided I would just ask him. He was very timely and conducted business appropriately and that was about it. While the 4th comment has positive things to say, it suggests the student thought I did not provide enough teacher presence.

In my next term, October 2021, I taught 2 sections of the same course – Math 111. This time I focused on not only providing the meaningful feedback during discussions and on exams, but I provided additional summaries of Module topics and generally sent more announcements. Student response was overwhelmingly positve. All 10 comments regarding the instructor were positive, with many students praising my quick response to emails (5/10) and meaningful feedback (6/10). Unlike the first term, a student noted how I changed their perspective on their own mathematics ability, stating > I used to feel like I sucked at math, but Professor Chamberlain really helped me kick that feeling through timely feedback on quizzes and assignments, and relatable discussion questions. Thanks for a great term! The efforts to increase announcements appeared to make a positive impact on the perspective of me as an instructor in the online course.

The next term I taught, January 2022, was more of the same praise. All 8 comments regarding the instructor were positive, including comments like the October 2021 term where I made students feel like they could perform well. An exemplary student comment was > The instructor was extremely fair and open to conversation regarding the coursework. He helped in any way he could be it helpful advise, tips and tricks, or simply just explaining why. He fostered a healthy learning atmosphere and made it easy to contact him if I needed help day or night. His willingness to see me succeed and genuine care reflects highly upon himself, his peers, and ERAU. Great work!

## Year 2: AY22-23 Student Comments [25/25 positive]

My first course in year 2 was a lower level mathematics course, Math 106. All 8 comments from students were again positive and highlighted meaningful feedback and presence in the course. While being an expert in a field is important, it is equally important to be able to share that expertise in a way that students understand. One student was explicit with my ability to make mathematics easier to understand, stating

> This professor made math come to life for me. He's a thorough teacher and communicates in a way that is understandable.

In October 2022 I taught my first EagleVision course. Unlike many other Math EagleVision courses, the majority of the in-class time was dedicated to group work or reporting out from group work. This proved effective and appreciated by students, with 4/4 positive comments from students such as

> Mr. Chamberlain was a great help when it came to our in class sessions over eagle vision. I strongly believe that the instructor did his best using many different methods to involve the class.

> Professor Chamberlain was a very engaging instructor, he kept the class interesting and graded assignments on time and fair.

January 2023 and March 2023 sections went similarly well. All 13 comments on the instructor were positive. Like previous terms, students highlighted the welcoming and encouraging teaching environment I cultivated with comments such as

> Dr. Chamberlain is very approachable with his students. Chamberlain's approachability with his students is a key aspect of his teaching style. He creates a welcoming and inclusive environment in his classroom where students feel comfortable asking questions and sharing their thoughts.

> Professor Chamberlain is very supportive with a student's efforts, very clear when explaining difficult topics, and (most importantly) very patient with students who are 'slower' than the

schedule. I can imagine him as enlightening and effective in the classroom. I would take another course with him given the opportunity.

## Year 3: AY23-24 Student Comments [13/13 positive]

Due to responsibilities as Associate Department Chair (all year) and Acting Department Chair (January-May 2024), I only taught 3 courses in AY23-24: MATH 111 in August 2023 and October 2023 as well as CSCI 251 in January 2024. Despite my heavy service load, I continued to be present and engaged in all courses. Students commented on how I was particularly helpful through extensive feedback and communicated in a way that students understood. An exemplary student comment from MATH 111 was *"Excellent Instructor and very helpful when needed. Engaged in the instruction and provided feedback and extra time when necessary to ensure the success of the class. It was apparent that he put the students first and made sure to guide the class when direction was not entirely understood."*

Since CSCI 251 is the first course for the Minor in Applied Data Science and Bachelor in Data Science, it was important to be present and engaged in the course despite heavy service responsibilities. Student comments were extremely positive, stating:

> This was one of the best instructors I have had. I struggled a lot in this course, and I always knew that I could reach out to Professor Chamberlain for anything, and I would get a prompt response. He is very good at explaining things and walking you through issues. I always received very helpful and useable feedback on all assignments.
>
> This class with Dr. Chamberlain has been my best class experience at ERAU so far. He was always available to help with questions and responded very quickly, didn't belittle me or make me feel stupid for asking them, provided meaningful answers that were helpful, and feedback that showed he actually looked at my work (and wasn't just replying from some template). All of our interactions were positive, and left me feeling like I was heard, and got the answers I needed.
>
> Dr. Chamberlain treated me as an individual and answered all questions in a way to enhance my course experience. The workload was relevant to the content, and well spaced, and grades were received in a timely manner with feedback that improved my understanding.

## Year 4: AY24-25 Student Comments [12/14 positive]

Due to responsibilities as Associate Department Chair (all year) and an additional course release from serving as Acting Department Chair in the prior year, I only taught 3 courses in AY24-25: MATH 502 in August 2024 and January 2025 as well as CSCI 251 in August 2024. Again, instructor comments were generally positive but some nuetral comments did appear. Neutral comments provided specific suggestions to improve, such as: > I didn't observe much interaction from the professor. While he graded our assignments and provided feedback, that was the extent of his engagement. I understand this is an asynchronous class, but having a weekly office hours session would have been extremely helpful. This would have given him an opportunity to go over example problems and address student questions in real time. That said, he did allow students to email him at any time and responded quickly. However, if one student had a question, there was a good chance others had the same question. A more structured approach, such as a shared Q&A session or discussion forum, could have benefited the class as a whole.

However, the majority of comments praised the effort and feedback provided in the course. > Dr. Chamberlain is one of the best professors I have had at ERAU. He genuinely cares for students and wants them to succeed. He is willing to work with students and help them in whatever way he can. He used so many different ways of communicating and trying to help us. He was available and easy to work with.

> Great professor for the class, especially with this course because MAN this course was the hardest class I've had in years. Dr. Chamberlain should change ALL the videos to his style because HE can teach this like its NOTHING, such a great professor!

I wish every professor in Embry Riddle was like Dr. Chamberlain. He provided us with the necessary tools to be sucessfull in this class. This is one of the toughest contents I have worked with while at Embry Riddle. Professor Chamberlain showed mastery in the course's content. He was very quick in answering questions which is not very commun in Worldwide classes, according to my experience. Just an excellent professor!

Mr. Chamberlain provided extensive knowledge and expertise throughout this course. I appreciated the weekly videos he created explaining the lessons and course material. They were clear and concise. He always made himself available.

## Year 5: AY25-26 Student Comments [16/18 positive]

I had a more usual 6 courses taught in the AY25-26, ranging over computer science, data science, statistics, and graduate-level mathematics courses. Yet the student comments continued to commend my emphasis on providing extensive feedback and interacting with students.

I really liked the detailed feedback for each question missed. This not only allowed myself to correct my misunderstanding, but see where I needed more work in my studies. I also enjoyed the ability to work ahead, but not too far. The week ahead is perfect (even for just homework).

I really appreciated the effort put in by the professor to make the course as engaging as possible. The feedback provided on weekly quizzes was excellent and something I wish more professors would do. Overall, great experience with the course.

I thought this class was absolutely superb. Professor Chamberlain created a very welcoming and open environment for learning about Python. The real relevance of what we were learning was always explained, and could be seen through the assignments we did.

Out of the two courses I've taken this takes the cake. The lectures were well-structured, and Dr. Chamberlain's teaching style struck a great balance between theory and practical problem solving. I especially appreciated the timely, specific feedback on assignments. The course also made room for growth; policies and discussions encouraged iteration and improvement rather than one-anddone grading. The materials (notes, example codes, and references) were organized and directly useful for quizzes and projects.
